1. This office action, in response to the amendment filed 10/26/2005, is a final office action.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 28-61 are rejected under 35 U.S.C. 102(e) as being anticipated by Tanoi (US 5,929,898).

Regarding claims 28 and 45-61, Tanoi discloses an editing system for editing base band signals shown in figure 2. The system included a first decoder 14-1 that receives a first bit signal 101-1 and outputs signal 102-1. A second decoder 14-N decodes a second signal 101-N and outputs a second signal 102-N. Picture combining section 15 is connected to the decoders and encoder 16 encodes the selected signal (column 4, lines 25-54). Each of the divisional picture signals included in the combined signal is encoded by the use of individual quantizing characteristic controlled by the controlling signal (abstract). A timing signal is produced that is synchronous with a frame of the combined signal 103 and provides an operation timing of the encoder

controller 21 (column 5, lines 38-41). The signal output from picture combining section 15 is re-encoded in encoder 16, which is controlled by encoder controller 21..

Regarding claims 29-44, the signals are re-encoded according to the selection signal (column 5, lines 43-50). In addition, the encoder controller detects movement quality of the object in the picture (column 5, lines 51-59) and encodes the signal according to the movement quality and the individual coding parameter (column 5, lines 60-67).

### ***Conclusion***

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
